1.0 BACKGROUND/SUMMARY

The Municipal Utilities Department operates and maintains the Delta Water Supply Intake Pump Station located west of the City of Stockton on the south bank of Empire Tract. The intake facility, constructed from 2009 to 2012, withdraws water from the Sacramento-San Joaquin Delta for treatment and distribution to the City of Stockton. The facility was constructed on an existing levee which was raised and widened with engineered fill. The existing levee is underlain by a layer of soft peat soils ranging from 10 to 25 feet in thickness at a depth of approximately 10 feet below the crown of the levee. Since the completion of construction in 2012, significant settlement had been observed in the areas not supported by piles.

The City contracted with HDR Inc. to complete a study, assessed the impacts of levee settlement, completed the design of mitigating improvements, prepared contract plans and specifications, and bid this project for construction.

On January 18, 2021, the Contractor, Saboo Inc., completed the subject improvements. On June 21, 2021, HDR conducted a topographic survey to see if there were any continuous settlements after the improvements. Except for a few spots of soil erosion and sinkholes around the parameter of pump station foundation, the rest of restored areas remained intact and exhibited no settlements on the levee. The City continues to annually monitor the levee settlement and retained KSN, Inc. to complete the second topographic survey on June 5, 2023. The report indicated additional spots of soil erosion and increased number of sinkholes, losing underlying pavement materials into the wet well under the pump station. See Exhibit 4.

This RFP is to retain a consultant to design an engineering solution to stop or mitigate the erosion of AB material into the wet well under the Delta Water Treatment Plant, Intake Pump Station. Technical support during bidding and construction periods of the project is also required. The location of Intake Pump Station is shown below.
